Hi Patrick,

I just realized that I overlooked the process for creating a new user's password when creating a record of them in the Asset Manager system, and I have a couple of questions on your preferences.

1. Do you want to create a password for each user individually? Or would you rather that a default one is assigned automatically (it could still be unique for each user)?
2. Would you like for users to be able to change their own passwords? Or should they go through you to change their passwords?

Let me know your preferences so that we can make this system work how you need.

Thanks!

Maria

I'd like to set the password at create time. And yes, a user should be able to change their password.

Thank you for that info! We will get it set up correctly for you.

Best,

Maria
