Hi Patrick,

Thanks for taking time to rank your priorities for this project. I have 3 follow-up items for you:

1. I've attached files with our **UI design ideas** for the SCAM system. Each file represents a sequence for a use case.
2. We'd love to go over the UI design with you and our whole team if possible to get your feedback. Are you available on **Tuesday at 7:00 pm** to meet **virtually** with us? We can meet via Google Meet, Zoom, or Discord. Just let us know your preference.
3. Would it be possible to get a **sample csv** with the kind of asset data you will be entering into the system? Of course, you would exclude W#s and any other sensitive information. We'd just like to get a more solid idea of field sizes and data types for the database.

Please let us know if you have any questions and if the Tuesday evening meeting time works for you.

Thanks for all your help so far!

Maria Bennett

In looking through these to make sure I'm ready for tonight.....

Contact screen, Location - this should be 2 parts in the db, though you can combine them into a single combobox if you want. To me, it seems simpler to have it be 2 combo boxes.

User passwords, can we make the minimum length be 16 chars?

And here's a small sample of the data in a csv that we'd want to import.
